

P-VoIP

CUT YOUR LANDLINE LOOSE WITH CONFIDENCE

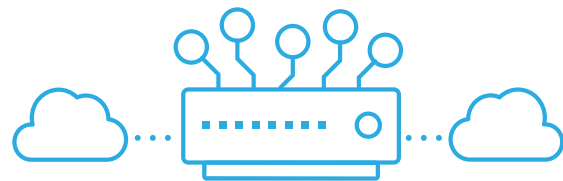

Crosswind VoIP Launches New POTS Technology.
Better Functionality. Lower Cost.

Say Hello to the Digital Future and Goodbye to Headaches.

Watch out! The FCC is letting telecom companies stop providing POTS (Plain Old Telephone Service), or what you may think of as copper landlines. You might ask—is that really a big deal? Actually, yes. It's huge.

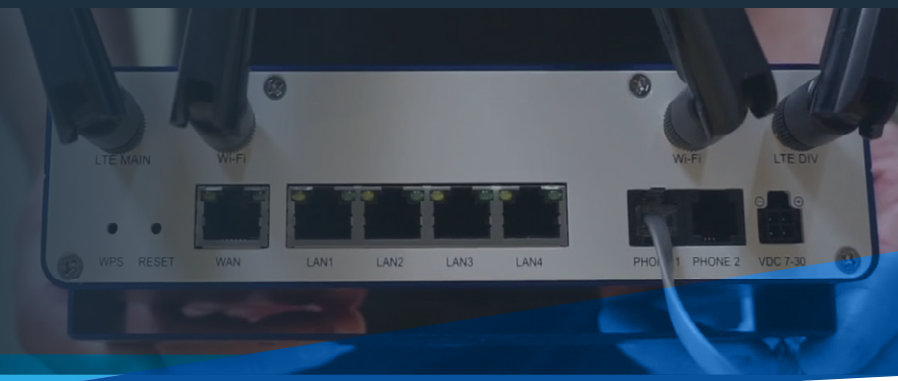

Here's why. Your cost for these outdated lines has already gone up, right? If you don't make a different choice quickly, you face even higher prices:

- Costs will skyrocket; and then,
- Your lines will disappear, just like the dinosaurs they've become.
- If that happens, your burglar alarms, elevator lines, modems, and fax lines are gone, too.

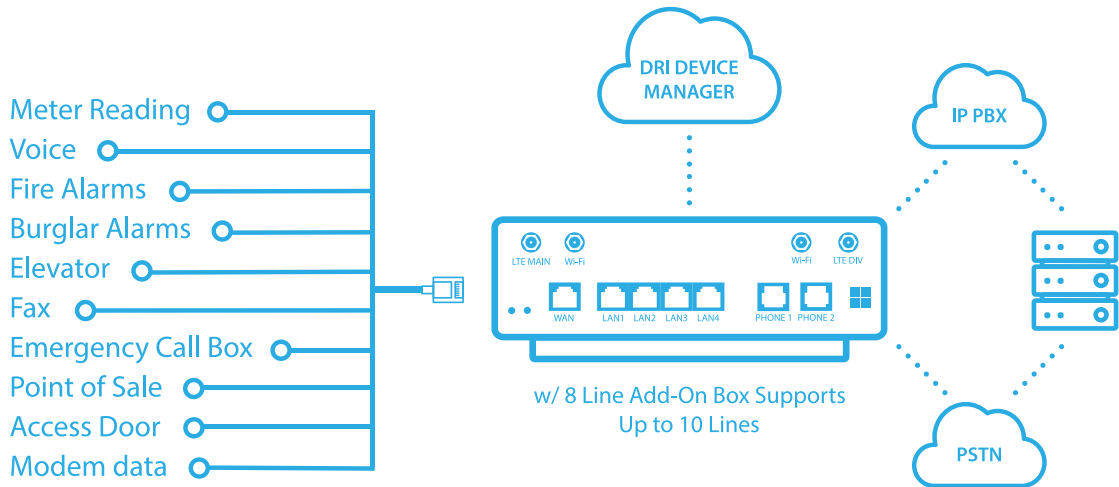

P-VoIP replaces your old telephone system, but it's not an equal exchange. You'll be getting a lot more than you had with copper, for a much lower cost. Even better, you don't need cabling or equipment upgrades. If there was ever a plug and play type of digital phone system, this is it.

Save time, money, and aggravation by converting your copper lines to a digital infrastructure now. It really is as simple as it sounds. Our installers take care of all the high-tech stuff while you keep on with everyday business. And better yet, there is no training involved!.

P-VoIP

P-VOIP AT A GLANCE

It looks like a couple of boxes with rabbit-ear antennae set on top, but don't be fooled. P-VoIP is powerful, with a full, enterprise-grade router and firewall. It makes sure your internet service provider is up and operating at maximum efficiency, and it provides a 4G LTE cellular connection as either a primary or backup connection to eliminate any chance of downtime.

WHAT IT DOES

P-VoIP will convert your old landlines to digital, using your existing internet connection. This includes voice, elevator lines, fire alarms, burglar alarms, fax, emergency call box, point of sale, security gate/door access, and modem data. It also provides VPN connectivity for remote workers.

THE RESULT

Moving to P-VoIP gives you professional installation, lower costs, nationwide coverage, call reporting, real-time reporting, and the ability to grow into a full-hosted PBX solution. Best of all, you keep your existing equipment, another checkmark in the cost-saving column. P-VoIP
